GEOLOGIC MAPPING: MAPPING GUIDELINES

the mapping of geological pdf

Planetary Geologic Mapping Program. The Planetary Geologic Mapping Program is managed by the USGS for NASA, producing geologic maps across the Solar System. The maps are made to the same standards as similar maps for the Earth, providing a consistent high-quality product readily intelligible to any geoscientist.

Geologic Maps: Geologic Maps: The picture above is a portrait of many square miles of the Earth's surface. The purpose of this leaflet is to explain how this portrait was made, how it can tell us about what lies beneath the surface of the ground, and other ways in which it can be useful to mankind.

Portraits of the Earth - U.S. Geological Survey

Geological mapping is vastly under-utilised in mineral exploration and mining. It provides the primary control on geology and underpins the decision-making at all stages of the exploration process. Effective exploration requires a good understanding of geological and metallogenic processes.
